

# Broadcast Full Motion Video Up to 35 Miles

## IP - Based Video Site

**Connectivity, Incorporated** (AMEX:CNE), a recognized leader in the wireless call box industry, announces a **revolutionary solar-powered wireless video surveillance system**. The entire video site is shipped completely assembled on a powder-coated aluminum pole for effortless installation.

### Features at a Glance

- 👁 Full motion video
- 👁 Wireless connection to any network
- 👁 Advanced DSP camera
- 👁 23x optical zoom with pan capabilities
- 👁 Infrared mode
- 👁 No license requirements
- 👁 Weather resistant powder-coated pole
- 👁 Simple network interface at monitoring station via standard Ethernet cables
- 👁 Tamper resistant-Silent alarm sent to monitoring station, cell phone, pager
- 👁 Video loss alarm
- 👁 Internet Protocol (IP) based for ease of user configuration

# Solar-Powered Wireless Video-Surveillance System

## Ensures smooth migration from analog to digital technology:

Convert existing analog-based CCTV to digital remote monitoring systems simply and cost-effectively without equipment obsolescence.

## No cabling costs:

The unit can be installed in hours and does not require AC power. Yet, it has all the features that a hard-wired system provides, such as real-time video, management of PTZ functions, and binary I/O triggers.

## Removes geographical barriers:

Enables coordinated remote monitoring and communication across multiple locations using standard network interfaces; including LANs, WANs, wireless networks and internet communication links.

## Selective viewing:

Allows one or more users to access video streams using same bandwidth as a single user.

## Ensures the correct video quality for each application:

Configurable bandwidths from 8Kbps to 3 Mbps provide the choice of constant video quality or capped bandwidth utilization.
